This article is written by one of our professional writers on . Here you can find a full information about "Peachtree 2011 Serial Number Crack Software Sites". To know more about this software, you can read its review and videos. You can also download it for free from its official website.

PeachTree is a database application developed by Automic, an Italian firm firm based in Genoa. PeachTree 2011 is the latest version of the database solution, which has been released to allow direct access from an iPad or Android based tablet computer using the well-known Adobe Air technology.. The latest version was released in late October, 2011. PeachTree 2011 has been designed to provide a direct connection with SharePoint, and is also an integrated part of the Automic Warehouse Control System. PeachTree can be run on a wide range of platforms including Windows XP, Vista, Windows 7 and server versions.

In June 2011, Automic released version 13.x of the application which allows direct access from SharePoint without the need to "round-trip" via a corporate database. This release is aimed at mid-size companies who deploy both Oracle and Microsoft databases in their environment. Specifically it enables integration with Microsoft's SQL Server 2008 R2 or later using Transact-SQL tailored for cloud computing environments.

PeachTree 2013 is a new version of PeachTree, a desktop database application for Windows. It has been designed to provide a better experience to the end-users and it makes use of Microsoft's Office 365 cloud service, improved collaboration features and improved security. In December 2013 Automic released their new release of PeachTree 2013. Version 13.14 introduces the cloud capabilities especially the integration with Office 365 which allows users to access files from other SharePoint sites or from documents stored in Microsoft's OneDrive storage solution using the cloud services from Microsoft, Dropbox or Google Drive.. Also a new feature called "Automate Services" allows complex processes to be easily implemented in multiple projects via a web-based wizard.
